

NEXUS Diagnostic Worksheet

Use this to locate the real constraints: leakage. bottlenecks. risks.

How to use: Complete sections 1–3, then prioritize the top 3 issues to fix in the next 30 days.

1) Symptoms

Check what's true right now.

- We have recurring emergencies and last-minute scrambles.
- Work gets stuck waiting on approvals or missing info.
- Quality is inconsistent or depends on “who did it.”
- We can't forecast workload or revenue reliably.
- We have unclear ownership; escalation goes to the top.

2) Leakage log (time / money / reputation)

List what's leaking and estimate the cost. Be honest.

Leakage / problem	Where it happens	Frequency	Estimated cost	Owner

3) Bottlenecks + root causes

Where does work slow down? What causes it?

Bottleneck	Trigger	Root cause	Fix idea	Effort (L/M/H)

4) Risk + reliability

List the failures that would hurt most.

Risk / failure mode	Likelihood (1–5)	Impact (1–5)	Control today	Control to add

5) Prioritize the top 3

Score each issue: **Priority = Impact x Frequency**. Choose the top 3 that can be executed within 30 days.

Issue	Impact (1–5)	Frequency (1–5)	Priority score	First action (within 48h)	Owner

Commitment: Pick the top 3 and schedule them into the next 30 days. If it's not scheduled, it's not real.
