

Operating Rhythm Blueprint

Design a weekly cadence that makes performance predictable.

Non-negotiable: cadence only works if your scorecard is reviewed weekly and actions are assigned with owners + due dates.

1) Weekly Ops Review (core meeting)

Step	Time	What happens	Output
1. Scorecard review	10–15m	Review KPIs vs target. No stories yet.	Off-track KPIs identified
2. Blockers	10m	What's stuck? Why? What decision is needed?	Decisions / escalations
3. Quality + incidents	10m	Defects, rework, customer complaints.	Prevention actions
4. Commitments	10m	Owners confirm actions + due dates.	Action list

Roles

- **Facilitator:** keeps it tight, enforces agenda.
- **Scribe:** captures actions + owners + due dates.
- **Owners:** accountable for KPI and follow-through.

2) Decision flow (keep escalation sane)

Use this rule: decisions belong where the information lives, unless risk requires escalation.

Decision type	Default lane	Escalate when
Customer exceptions / refunds	Ops owner	Repeated pattern or high-value impact
Pricing changes	Leadership decision	Always (unless pre-approved band)
Hiring / staffing	Function lead	Budget impact beyond threshold
Process changes	Workflow owner	Impacts compliance or SLA

3) Reporting structure (weekly)

One page, same day every week. Keep it boring.

KPI	Target	This week	Trend	Owner	Action if off-track

4) Meeting agenda template

Copy/paste this agenda into your calendar invite.

- **Objective:** Review scorecard, unblock work, assign actions.
- **Pre-read:** Scorecard updated by [Day/Time].
- **Agenda:**
 - 1) Scorecard (10–15m): KPI vs target, identify off-track.
 - 2) Blockers (10m): stuck items, decisions needed.
 - 3) Quality/Risk (10m): incidents, defects, prevention actions.
 - 4) Actions (10m): assign owner + due date, confirm next steps.
- **Rules:** No agenda drift. No action without owner + due date.

Tip: If you can't keep this meeting under 60 minutes, you're tracking too much or avoiding decisions.
