ClearGlassCorp NEXUS — Enterprise Enhancement

This pack gives you a practical operating system to tighten execution, standardize work, and build predictable performance.

Rule: Don't read everything. Implement in sequence. Momentum beats perfection.

What's inside

- **NEXUS Playbook** — how the system works and how to install it.
- **Diagnostic Worksheet** — identify leakage, bottlenecks, risks, and weak links.
- **Operating Rhythm Blueprint** — meetings, reports, decision flow, accountability.
- **Implementation Checklist** — a step-by-step 30-day rollout.
- **Templates** — SOP template, meeting agenda, weekly scorecard, KPI tracker.

30-day installation path

Days 1–3: Run the Diagnostic.

Complete the Diagnostic Worksheet. Pick the top 3 problems that cost you the most time, money, or reputation.

Days 4–10: Install the Operating Rhythm.

Define weekly cadence, owners, and a single scorecard. No more random meetings. Decisions need a lane.

Days 11–20: Standardize the critical workflows.

Document SOPs for the 3 workflows that create the most chaos. Use the SOP template.

Days 21–30: Lock in KPIs + automate the first bottleneck.

Track weekly. If it's not measured, it's a rumor. Automate one high-friction handoff.

Success criteria

- You can explain “how work flows” in 2 minutes.
- Weekly reporting is boring (that's a compliment).
- Owners know their numbers and act without being chased.
- SOPs exist for recurring work, and are actually used.
- Fewer emergencies because the system catches issues earlier.
